**Subject:** Ion tox call next week

Hey Phil—

I know the main topic of discussion next week is not wild rice, but you said that we might also talk about wild rice. Today I talked with Chris Wagener from Region V – she was following up on the peer review report. She is interested in what we (EPA-Duluth) have to say about the analysis/interpretation of the wild rice stuff, and was wondering if it would be a problem if she sat in on the call next Thursday. Basically, I think the idea was to have one call all three parties hear, rather than having an EPA-Duluth/MPCA call, then have Chris talk to each of us separately.

Let me know what you think. If you'd rather, we could schedule two calls, one to talk about non-wild rice ion tox and the other to discuss wild rice-related stuff.

Dave
